the analysis and design of primary structural system. The attachment of non- structural elements is the responsibility of the architect or designer, unless specifically shown otherwise.

### **STRUCTURAL DESIGN CALCULATIONS**

However, the majority of timber structures adopt timber materials that are assumed not to be durable and therefore, it is the design of the structure itself which plays the most important part, to ensure that the timber is not

5.3 DESIGN METHODS AND VALUES Timber bridges are designed according to the principles of engineering mechanics and strength of materials, assuming the same basic linear elastic theory applied to other materials. The method used for design is the allowable stress design method, which is similar to service load design for structural steel.

## **BASIC TIMBER DESIGN CONCEPTS FOR BRIDGES**

This guide is intended as introduction to residential gravity loads, load paths and structural wood design. Further study is recommended prior to designing structures. Proper structural design engineering requires a thorough understanding of construction materials, construction practices,
