Following are the Laplace transform and inverse Laplace transform equations. Following table mentions Laplace transform of various functions. To convert Laplace transform to Fourier transform, replace  $s$  with  $j\omega$ , where  $\omega$  is the radial frequency.

### **Difference between Fourier Transform vs Laplace Transform**

Transforms Fourier Transform The motivation for the Fourier transform comes from the study of Fourier series. In the study of Fourier series, complicated but periodic functions are written as the sum of simple waves mathematically represented by sines and cosines.

### **THE BAD TRUTH ABOUT LAPLACE'S TRANSFORM**

Laplace transform 1 Laplace transform The Laplace transform is a widely used integral transform with many applications in physics and engineering. Denoted  $\mathcal{L}$ , it is a linear operator of a function  $f(t)$  with a real argument  $t$  ( $t \geq 0$ ) that transforms it to a function  $F(s)$  with a complex argument  $s$ . This transformation is essentially bijective for the majority of practical

In mathematics, the Laplace transform is an integral transform named after its discoverer Pierre-Simon Laplace (/ ˈlæpˌleɪs ˈtʃæŋˈfɔːrm /). It takes a function of a real variable  $t$  (often time) to a function of a complex variable  $s$  (complex frequency).. The Laplace transform is very similar to the Fourier transform. While the Fourier transform of a function is a complex function of a real variable ...

Fourier transforms are for converting/representing a time-varying function in the frequency domain. A Laplace transform are for converting/representing a time-varying function in the "integral domain"
