Liquid crystals (LCs) are a state of matter which has properties between those of conventional liquids and those of solid crystals. For instance, a liquid crystal may flow like a liquid, but its molecules may be oriented in a crystal-like way. There are many different types of liquid-crystal phases, which can be distinguished by their different optical properties (such as textures).

A liquid crystal thermometer, temperature strip or plastic strip thermometer is a type of thermometer that contains heat-sensitive (thermochromic) liquid crystals in a plastic strip that change colour to indicate different temperatures. Liquid crystals possess the mechanical properties of a liquid, but have the optical properties of a single crystal. Temperature changes can affect the colour ...

INTRODUCTION: THE CRYSTAL-LIQUID DUALITY. Lead halide perovskites have emerged as superstars among materials for photovoltaics and light emission (1–6). A large number of studies have explored the mechanistic origins of their electronic properties, such as long carrier lifetimes, long carrier diffusion lengths, and exceptional defect tolerance (7–11).

Hierarchical control of two-dimensional (2D) molecular alignment patterns over large areas is essential for designing high-functional organic materials and devices. However, even by the most powerful current methods, dye molecules that discolor and destabilize the materials need to be doped in, complicating the process. We present a dye-free alignment patterning technique, based on a scanning ...

44 If no crystals have formed, your solution is too dilute. Warm the solution and allow it to stand for up to 24 hours, so that some evaporation of water takes place.

2. Synthesis of morphological Cu<sub>2</sub>O crystals with different architectures 2.1. Basic strategies for synthesis of faceted Cu<sub>2</sub>O crystals. Faceted Cu<sub>2</sub>O micro-/nanocrystals can be prepared by many synthetic methods, including wet-chemistry route (such as liquid reduction, hydrothermal and solvothermal synthesis), electrodeposition, sputtering, and irradiation technique .
