Low Energy Electrons and Surface Chemistry - GBV

low energy electrons are reviewed as well as its application in the lens-less holographic microscope. Investigations of in-situ manipulation of objects with nanometer sized dimension will be discussed.

Holography with Low Energy Electrons: Principles and

The biological effects of low energy electrons and photons are of particular interest in radiation biology as these are strongly absorbed in micrometer and sub-micrometer layers of tissue.

5 (ii) Inelastic Interactions If energy is transferred from the incident electrons to the sample, then the electron energy of the electron after interaction with the sample is consequently reduced:

Properties of Electrons, their Interactions with Matter

Purpose: To investigate differences in energy depositions and microdosimetric parameters of low-energy electrons in liquid and gaseous water using Monte Carlo track structure simulations.

After a parallel beam of low-energy electrons interacts with a specimen, the electrons form a diffraction or LEED pattern which depends on periodicity present at the surface and is a direct result of the wave nature of an electron.

Low-energy electron microscopy - Wikipedia

Low energy electrons interact strongly with matter: electron mean free path λ_e is small. Only e-scattered from near surface can leave the surface, surface sensitive M.P. Seah, W.A. Dench, Surf.

Low Energy Electron Diffraction - LEED

Recent advances in the fabrication of nanostructures and nanoscale features in metasurfaces offer new prospects for generating visible light emission from low-energy electrons.

Smith's Purcell Radiation from Low-Energy Electrons - ACS

Electrons traveling from the filament (cathode) to the target (anode) convert a small percentage (1%) of their kinetic energy into x-ray photons by the formation of bremsstrahlung and characteristic radiation.

Production of X-rays and Interactions of X-rays with Matter

The biological effects of low energy electrons and photons are of particular interest in radiation biology as

these are strongly absorbed in micrometer and sub-micrometer layers of tissue. RBE values not only depend on the electron and photon energies but also on the irradiation condition, cell type and experimental conditions.
