(A. Akutowicz, Zentralblatt MATH, Vol. 1009, 2003) "The interplay between signal processing and mathematics makes it difficult to find in a single volume the essentials of modern signal processing presented in a way which would be both rigorous for mathematicians and accessible for engineers.

A signal represents a quantity that varies in time. That definition is pretty abstract, so let's start with a concrete example: sound. Sound is variation in air pressure. A sound signal represents variations in air pressure over time. A microphone is a device that measures these variations and generates an electrical signal that represents sound.
