

multivariable and vector calculus pdf

Vector calculus, or vector analysis, is a branch of mathematics concerned with differentiation and integration of vector fields, primarily in 3-dimensional Euclidean space. The term "vector calculus" is sometimes used as a synonym for the broader subject of multivariable calculus, which includes vector calculus as well as partial differentiation and multiple integration.

In the three-dimensional Cartesian coordinate system, the gradient of some function (f) is given by: $\nabla f = \hat{i} \frac{\partial f}{\partial x} + \hat{j} \frac{\partial f}{\partial y} + \hat{k} \frac{\partial f}{\partial z}$, where \hat{i} , \hat{j} , \hat{k} are the standard unit vectors.. The gradient of a tensor field, T , of order n , is generally written as $\nabla \cdot T = \nabla T$ and is a tensor field of order $n + 1$. In particular, if the tensor field has order 0 (i.e. a scalar), f , the resulting gradient, ∇f , is a vector field.

Section 4-2 : Iterated Integrals. In the previous section we gave the definition of the double integral. However, just like with the definition of a single integral the definition is very difficult to use in practice and so we need to start looking into how we actually compute double integrals.

Of the countless number of texts entitled "Advanced Calculus", this is probably the most mathematically rigorous and challenging. Despite the title, this is a classic textbook written by two of the 20th century's preeminent mathematicians on the topic of abstract analysis in Banach spaces and the calculus of differentiable manifolds.
