physics vector worksheet with pdf

Vector Worksheet Much of the physical world can be described in terms of numbers. Examples of this are the mass of an object, its temperature and its volume. These are called scalar quantities. But some quantities also need a direction to fully describe it. What if you wanted directions to the nearest physics lab?

Physics Vector Worksheet 1. A person is walking on a treadmill. The treadmill is moving backwards at a speed of 3.0 m/s. The person is moving forward relative to the treadmill at 2.5 m/s. What is the person's velocity relative to the ground? 2. An airplane travels east at an air speed of 400.0 m/s into a head wind of 35.0 m/s.

Physics Vector Worksheet #1 In physics we distinguish between scalars and vectors. Scalars are quantities that are a number and a unit; vectors are a number and a unit plus a direction. There are a number of different ways to show the direction of a vector: left-right-up-down, x and y components, and polar coordinates – a length and an angle.

3. A component is the effect of a vector in a given x- or y- direction. A component can be thought of as the projection of a vector onto the nearest x- or y-axis. SOH CAH TOA allows a student to determine a component from the magnitude and direction of a vector. Determine the components of the following vectors.
