Element - Wikipedia

The canvas element is part of HTML5 and allows for dynamic, scriptable rendering of 2D shapes and bitmap images. It is a low level, procedural model that updates a bitmap and does not have a built-in scene graph; however through WebGL allows 3D shapes and images and so-on.

Canvas element - Wikipedia

A chemical element is a substance that contains only one type of atom. If a substance contains more than one type of atom, it is a compound. An element can be a solid, liquid or gas. The smallest particle of such an element is an atom. Atoms are made up of protons, neutrons, and electrons. Each element contains only one kind of atom. The number of protons in an atom is called the atomic number.
